## Suggested Options:

With two players, player 1 plays the high part and player 2 plays the low part. Then switch parts.
With three players, players $1 \& 3$ play the high part and player 2 plays the low part. Then switch parts.
With four players, divide into pairs-either players $1 \& 3$ play the high part and players $2 \& 4$ play the low part or players $1 \& 2$ play the high part and players $3 \& 4$ play the low part. Then switch parts.

With five players, players $1,3, \& 5$ play the high part and players $2 \& 4$ play the low part. Then switch parts.
If you have more players, follow the same principles and make necessary adjustments for your particular situation.
